

Contec® Healthcare Hard to Reach Tool and Microfiber Covers

Disposable covers for high cleaning applications

The Contec® Healthcare Hard To Reach (HTR) tool and microfiber covers are ideal for hard-to-reach or difficult-to-clean surfaces. The innovative tool features a flexible head design that conforms to irregular surfaces for cleaning and disinfecting.

The covers are made of microfiber and are low-linting. The single-use cover eliminates the opportunity for cross-contamination risks and does not interfere with disinfectant efficacy. Available in nonsterile only, the covers can be used wet or dry in the anteroom and buffer room, excluding inside the Primary Engineering Control (PEC). They can, however, be used behind or on top of the PEC.

Using Contec’s QuickConnect™ systems, the HTR tool may be attached to a wide variety of handles. Contec Healthcare’s Hard To Reach tool is an effective and efficient choice for hard-to-reach and difficult to clean surfaces within the compounding environment.

Features	Benefits
Synthetic low-lint construction	• Compatible with common disinfectants and cleaning solutions
New microfiber cover for each use	• Provides efficient, effective removal of surface contamination • Allows use of both sides of the cover
Flexible tool design	• Flexible and conforms between tight places
Compatible with existing hardware	• Tool can be used alone or with QuickConnect handles when paired with a QuickConnect adaptor
Lightweight	• Reduces operator strain when using overhead

Part no.	Description	Size	Packaging
