## CONSTIX<sup>®</sup> Sealed Foam Swab SF-7

## Flexible tip sealed foam swab

CONSTIX<sup>®</sup> SF-7 swab consists of 100 PPI polyurethane foam adhesivebonded to a flexible nylon tip. The tip is mechanically secured in a tubular polypropylene handle.

The polyurethane foam head provides good particle entrapment and removal. The absorbent foam enables solvents, such as isopropanol and ethanol, to be readily sorbed for applications involving solvent delivery and removal. The small, flexible tip makes the SF-7 ideal for accessing small areas and crevices.

Though compatible with many common solvents, the SF-7 is not recommended for use with ketones such as acetone or MEK.
