

Contamination Control Assessment

Through dedication and innovation, Contec has produced effective cleaning and disinfecting products for a wide range of the most critical environments for more than 30 years. The Technical Services Group has worked alongside customers in their facilities, providing guidance, training, and problem-solving. The culmination of this experience is the Contamination Control Assessment (CCA).

Plan

Together we will determine the specific cleaning and disinfection protocols, procedures and tools to evaluate through your facility.

Observe

Our team will observe and speak with personnel in areas of agreed evaluation to identify potential process or procedural improvements.

Report

Your CCA report will include a summary of the observations and specific recommendations for improvement, where warranted, including suggestions for use of specific tools or equipment.

Purpose

By observing the facility staff operations and behaviors, Contec provides recommendations as to improved product suitability, contamination/infection prevention protocols, best practices and cost-saving opportunities. CCAs are a value-added service, consultative in nature and provided at no cost to the end user/customer. We understand that in the Lab Animal environment, there are a multitude of processes required to reduce/mitigate the potential for infection. Our goal is to provide process improvement for the overall facility, reducing labor requirements, improving efficiencies, effectiveness and cost.

Program Details

There is no "one size fits all" approach to a Contamination Control Assessment. As every end user and facility is different, the CCA is tailored to the unique needs of the assessment site.

SOP

We will build an Assessment and Recommendation protocol/plan (SOP) that will include a summary of the observations and specific recommendations for process improvement, where warranted, including suggestions for use of Contec's proprietary tools and those of our selected specialty vendors. Our team comes back with appropriate samples to demonstrate how we would implement the SOP in your facility.

Final Documentation

- Usage requirements
- Estimated product usage per protocol and facility
- Detailed rollout plans
- Cost analysis and overview
- Competitor comparisons if required
- Material and equipment compatibility
- Distribution and logistics in conjunction with distributor
- Human and animal safety information
- Helpful clinical studies and other information
- Distributor shall provide Chab prices

Implementation and Training

Following purchase by the facility of all tools/products, our team will come back into the facility to provide Implementation and Training for the entire staff including any needed installations.
